

Read Before Use:

- ① At present, the camera only supports 2.4G Wi-Fi with 802.11b/g/n protocol, does not support 5G Wi-Fi. Please keep the 2.4G connection between the phone and the router.
- ② Wireless products are greatly affected by the installation environment. If the Wi-Fi signal is weak, it will often lose connections or video freezes. Therefore, before fixing the camera on the wall, place the camera in this position and test whether the real-time preview image is normal.
- ③ With AI human detection set, how far away can a person trigger an alarm?

This is determined according to the installation height and angle of the camera, generally can be triggered within 10 meters (32.9ft) . We recommend that the camera be installed at a height of 3m (9ft) and 30 degrees from the horizontal. Adjust the angle of the camera, that is, the person is upright in the image of the camera.

- ④ The camera should be installed in an open location as much as possible.
