

1. What if i can't get any display on monitor from NVR system?

If NVR display the system LOGO after power on, then the screen turns to black, this is because your monitor input resolution is incompatible with the NVR's output resolution. The defaulted output resolution of the NVR is 1920*1080, which may not be compatible with some monitors.

Trouble shooting steps:

- 1 Please use another monitor which support resolution of 1920*1080.
- 2 When you are able to see the menu, Please right-click mouse navigates to **Main Menu** --> **System**--> **Display**, Choose the resolution your previous monitor support →click "OK" to save it.

- 3 Connect the NVR with your previous monitor. It should be worked then.
